I am writing to support the approval of the OCS air permit for South Fork Wind, LLC. I've reviewed the supplemental draft fact sheet and agree with its reasoning. Specifically regarding construction offsets, I agree that there is no regulatory requirement, and that the intent of the Clean Air Act at Section 173 (a)(1)(A) is to apply offset requirements to operation of a source (only). I further note that EPA's proposed action is one step towards leveling the playing field with onshore emission sources. I recommend that EPA approve the South Fork Wind OCS air permit as-proposed, and that for future OCS air permits I recommend that EPA look for other opportunities to streamline review and avoid permitting uncertainty.

Thank you for the opportunity to provide these comments.
