

OFFICE OF ENVIRONMENTAL JUSTICE AND EXTERNAL CIVIL RIGHTS

WASHINGTON, D.C. 20460

September 2024

MEMORANDUM

SUBJECT: Build America, Buy America Act (BABA) Implementation Procedures for EPA Office of Environmental Justice and External Civil Rights (OEJECR) Federal Financial Assistance Programs

The following frequently asked questions (FAQs) are for federal financial assistance programs under the purview of the Environmental Protection Agency (EPA) Office of Environmental Justice and External Civil Rights. Responses are based on the Build America, Buy America Act (BABA)¹, Office and Management and Budget (OMB) guidance^{2,3}, and EPA guidance, among other resources.

The FAQs will be added or updated as necessary, if subsequent regulations or guidance is finalized by OMB.⁴ The FAQs are to assist federal financial assistant recipients and EPA Project Officers in determining whether Build America, Buy America Act (BABA) applies to projects receiving federal funding. Recipients are encouraged to work with their EPA project officer and EPA project officers are encouraged to work with their headquarters contacts. For current information on BABA requirements and waivers, visit the EPA’s BABA website: <https://www.epa.gov/cwsrf/build-america-buy-america-baba>. Questions may also be submitted to BABA-OEJECR@epa.gov.

The FAQs in this document apply to the implementation of BABA requirements for the Office of Environmental Justice and External Civil Rights infrastructure programs listed here unless superseded by regulation, statute, or other applicable guidance:

- Environmental Justice Government-to-Government (EJG2G) Program
- Environmental Justice Thriving Communities Grantmaking (EJ TCGM) Program
- Environmental and Climate Justice Community Change Grants (CCG) Program

This Implementation Procedures document is organized to provide responses to questions in the following topic areas:

Section 1: General Information	4
What is Build America, Buy America Act (BABA)?	4
What is “federal financial assistance”?	4
What is the effective date of BABA?	4
Does BABA end or sunset?	4
Where can I find more information about BABA?	4
Section 2: Applicability	5
How is “infrastructure” defined for BABA?	5
Is there a test to determine whether my project is an “infrastructure” project?	5

¹ Build America, Buy America Act (BABA). Pub. L. No. 117-58, §§ 70901-52

What is a “project”?.....	6
How is “Purpose, Time, and Place” (PTP) used to determine the scope of a project?.....	6
How do I know if my project is “publicly owned”?.....	7
Do BABA requirements apply to federal financial assistance provided to eligible private entities for a project solely for private use?	7
If I am a subrecipient, but I contract with an entity, does BABA still apply?.....	7
Does BABA apply to no cost amendments?.....	7
Would federally funded infrastructure projects outside of the United States need to comply with the BABA requirements?.....	7
Are products and materials that purposefully decay or decompose considered permanent items that are subject to the BABA requirements?	8
If most of the project is BABA compliant, and a small portion is not, can an assistance recipient self-fund (i.e., paying with non-federal dollars) the non-compliant products?	8
Section 3: Product Coverage	9
What are the categories of products covered under BABA?.....	9
What does iron and steel mean?.....	9
For iron and steel products, does a manufacturer need to demonstrate compliance from initial melting through the finished product (including coatings)?	9
For products made of iron and steel, what is the difference between predominantly and primarily iron and steel?.....	9
What is the definition of construction materials (with examples)?	9
What are the specific BABA requirements for construction materials?.....	10
What are manufactured products (with examples)?.....	11
Which category will certain items fall under for BABA?.....	11
What are “Section 70917(c) materials”?	11
Does EPA have a list of products to be classified as “Iron and Steel” under BABA?	11
Does EPA have a list of products that could be made “primarily” of iron and steel but would be classified as “manufactured products” under BABA?.....	11
Is asphalt paving a covered product under BABA?.....	12
Section 4: Implementation (Compliance and Enforcement).....	13
Who is responsible for BABA compliance and enforcement?	13
When will the BABA requirements be assessed for compliance? Do assistance recipients need to have waivers for potential non-domestic products before assistance agreements are in place, at the time products are procured or products are incorporated into the project (i.e., used)?.....	13
Will EPA provide documentation for BABA for bid solicitations and suggested contract language? Will EPA provide suggested language for Assistance Agreements?	13
How can product compliance with the BABA requirements be demonstrated?	14
Will EPA provide a form or template for tracking and documenting compliance?.....	15
Are recipients responsible for their contractors’ compliance with BABA?	15
What is the responsibility of manufacturers in complying with BABA?	15
If a manufacturer claims to comply with the Buy American Act, does it also comply with BABA?.....	15
Is there a master list of manufacturers, suppliers, or products that are BABA compliant?.....	15
How will assistance recipients manage certification letters for every product used in an infrastructure project?	15
Who is responsible for documenting the 55 percent content requirement for manufactured products under BABA? What if the final manufacturer cannot trace or verify domestic origin for all components?	16

How do final product fabricators document compliance when the final step of manufacturing may be simply assembling components?	16
Will Material Test Reports be acceptable in lieu of a BABA certification for iron and steel?	16
Can a manufacturer use a fillable certification letter for products?	16
Are product certifications from suppliers and distributors allowed?	16
How long should assistance recipients keep compliance documentation?	17
Section 5: Implementation (Waivers)	18
Are Federal agencies able to waive BABA requirements?	18
Are there waivers that might apply to my project?	18
What should I do if I'm covered by a program-wide or agency-wide waiver? Do I need to maintain documentation?	18
Who may apply for a waiver and how do you apply?	18
If a product is not readily available domestically, will EPA provide product waivers?	19
If compliance with BABA will increase the costs of my project, can I seek a waiver? What information is needed to justify a waiver based on unreasonable costs?	19
Can administrative costs associated with tracking and verification of certifications be considered when determining if the cost of a project increases by 25 percent or more?	19
Can an assistance recipient request a waiver based on a specification written for a specific brand or model of product (that is, a specification that names a branded item or model)?	19
How can assistance recipients and construction contractors address product delivery delays?	20
Do waivers need to be approved before the award is granted?	20
Do individual applicants need to apply to use the De Minimis waiver?	20
Section 6: Co-funding	21
If projects are co-funded with funding mechanisms that do not require BABA, must the entire project comply with BABA?	21
How will project requirements be determined for co-funded projects subject to different programmatic or waiver conditions?	21
When a project receives funding from multiple EPA assistance programs, how will the agency determine which waivers apply?	21
When a project receives funding from Federal assistance programs in multiple agencies (e.g., EPA and USDA; EPA, FEMA, and DOT), how will potentially different waivers be implemented?	21
When a project receives funding from multiple assistance programs (within EPA or from separate agencies), which agency provides oversight for BABA implementation?	21
When does Cognizant Agency apply to waivers?	22
Section 7: Miscellaneous	23
How do international trade agreements affect the implementation of the BABA requirements?	23
What if the project is primarily private infrastructure but includes a connection to a public system?	23
Is there a minimum project amount that requires BABA compliance?	23
Appendix 1: Example Construction Contract Language for BABA	24
Appendix 2: Example Assistance Agreement Language for BABA	25
Appendix 3: Project examples that would clearly require BABA compliance or would clearly not trigger BABA	26
Appendix 4: Products likely made "primarily" of iron and steel to be classified as Iron and Steel	28
Appendix 5: Products likely made "primarily" of iron and steel to be classified as Manufactured Products	30
Appendix 6: Waiver Request process	32
Appendix 7: Current Agency-wide BABA Waivers	34

SECTION 1: GENERAL INFORMATION

What is Build America, Buy America Act (BABA)?

On November 15, 2021, President Biden signed into law the Infrastructure Investment and Jobs Act ("IIJA" or "Bipartisan Infrastructure Law"), Pub. L. No. 117-58, which includes the Build America, Buy America Act (BABA). Pub. L. No. 117-58, §§ 70901-52. BABA strengthens Made in America Laws and will bolster America's industrial base, protect national security, and support high-paying jobs.

BABA requires that on or after May 14, 2022, the head of each covered Federal agency shall ensure that "none of the funds made available for a federal financial assistance program for infrastructure... may be obligated for a project unless all of the iron, steel, manufactured products, and construction materials used in the project are produced in the United States." (Build America, Buy America (BABA) Act, P.L. 117-58, Secs 70911 - 70917). EPA is a covered agency.

BABA applies to all federal financial assistance as defined in section 200.1 of title 2, Code of Federal Regulations where funds are appropriated or otherwise made available and used for a project for infrastructure, regardless of whether the project is funded through IIJA or not and regardless of whether infrastructure is the primary purpose of the Federal award.

What is "federal financial assistance"?

Federal financial assistance means financial assistance that entities receive or administer typically in the form of grants, cooperative agreements, non-cash contributions or donations of property, direct assistance, loans, loan guarantees, and other types of financial assistance.

What is the effective date of BABA?

BABA went into effect on May 14, 2022. All new, or amended, federal financial assistance awards for infrastructure projects made after this date are required to comply with BABA. Compliance does include application of existing, or the development of new, waivers.

Does BABA end or sunset?

No, it is a permanent law.

Where can I find more information about BABA?

Here are several useful references:

- EPA's BABA website: <https://www.epa.gov/cwsrf/build-america-buy-america-baba>
- OMB's Made in America website: <https://www.madeinamerica.gov/>
- OMB's M-24-02: <https://www.whitehouse.gov/wp-content/uploads/2023/10/M-24-02-Buy-America-Implementation-Guidance-Update.pdf>
- OMB's final Guidance for Grants and Agreements (2 CFR 184): <https://www.federalregister.gov/documents/2023/08/23/2023-17724/guidance-for-grants-and-agreements>

We recommend stakeholders review these resources to better understand domestic sourcing requirements applicable to all infrastructure projects using Federal financial assistance.

SECTION 2: APPLICABILITY

How is “infrastructure” defined for BABA?

The IJA definition of “infrastructure” is interpreted broadly and encompasses all EPA-funded public infrastructure projects. The term “infrastructure” includes, at a minimum, the structures, facilities, and equipment for, in the United States, roads, highways, and bridges; public transportation; dams, ports, harbors, and other maritime facilities; intercity passenger and freight railroads; freight and intermodal facilities; airports; water systems, including drinking water and wastewater systems; electrical transmission facilities and systems; utilities; broadband infrastructure; and buildings and real property, and equipment that generate, transport, and distribute energy including electric vehicle (EV) charging.⁵

When determining if a program has infrastructure expenditures, OMB advises federal agencies to interpret the term “infrastructure” broadly and consider the definition provided above as illustrative and not exhaustive. When determining if a particular construction project of a type not listed in the definition above constitutes “infrastructure,” agencies should consider whether the project will serve a public function, including whether the project is publicly owned and operated, privately operated on behalf of the public, or is a place of public accommodation, as opposed to a project that is privately owned and not open to the public. Projects with the former qualities have greater indicia of infrastructure, while projects with the latter quality have fewer.

Projects consisting solely of the purchase, construction, or improvement of a private home for personal use, for example, would not constitute an infrastructure project. This would include such projects as adding solar panels, battery storage, or electric vehicle chargers on private residences for the exclusive benefit of the owners/residents. Note that projects in mixed-use buildings (e.g., both residential and commercial in the same property) will need to be reviewed for BABA applicability on a case-by-case basis.

BABA requirements only apply to articles, materials, and supplies that are consumed in, incorporated into, or affixed to an infrastructure project. As such, it does not apply to tools, equipment, and supplies, such as temporary scaffolding, brought to the construction site and removed at or before the completion of the infrastructure project. Nor does BABA apply to equipment and furnishings, such as movable chairs, desks, and portable computer equipment, that are used at or within the finished infrastructure project but are not an integral part of or permanently affixed to the structure.

BABA also does not apply to technical assistance, planning, research / feasibility studies, or other non-construction services.

Is there a test to determine whether my project is an “infrastructure” project?

The following provides an outline of how to determine whether a project would be considered an “infrastructure” project for OEJECR programs. Where there are gray areas of interpretation, the recipient should contact their project officer for further guidance for their specific situation. See Appendix 3 for additional examples.

In considering whether a project is a BABA-applicable project, consider the following:

- 1) Is the project funded (in whole or in part) by EPA federal financial assistance?
 - If no, it is not subject to BABA. If yes, consider the next question.

⁵ 2 CFR 184.4.

- 2) Does the project involve the construction, alteration (including installation), maintenance, or repair of infrastructure in the U.S., regardless of whether infrastructure is the primary purpose of the award? (see definition of infrastructure in prior question)
 - If no, it is not subject to BABA. If yes, consider the next question.
- 3) Is the project for public use? (For example, does the project serve a public function, including whether the project is publicly owned and operated, privately operated on behalf of the public or is a place of public accommodation, as opposed to a project that is privately owned and not open to the public?)
 - If no, it is not subject to BABA. If yes, consider the next question.
- 4) Does the project involve iron, steel, manufactured goods, or construction materials, remaining with the project, i.e., will these materials be incorporated in or consumed by the project?
 - If no, it is not subject to BABA.
 - If the answers to all questions are yes, then the project must be compliant with BABA (although waivers may be granted).

What is a “project”?

OMB defines “project” as any activity related to the construction, alteration, maintenance, or repair of infrastructure in the United States. Further, EPA interprets a “project” as consisting of all associated activities regardless of the number of contracts or financial awards involved so long as all are closely related in purpose, time, and place. The intentional splitting of projects into separate and smaller contracts or financial awards to avoid BABA applicability on some portions of a larger project is not allowed, particularly where the activities are integrally and proximately related to the whole. In situations where activities are clearly undertaken in separate phases that are distinct in purpose, time, or place, separate projects would carry separate requirements.

Generally, for projects funded by OEJECR federal financial assistance agreements, the “project” is associated with the specific award (or subaward issued by the EPA grant recipient).

How is “Purpose, Time, and Place” (PTP) used to determine the scope of a project?

When questions arise regarding the extent of an infrastructure project, EPA will use a “Purpose, Time, and Place” (PTP) test to determine a “project” for BABA applicability.⁶

While each analysis will be fact specific, generally the PTP test will consider whether, regardless of the number of individual awards, contracts or subawards, the activities funded are closely related in purpose, time, and place. The PTP test considers whether the activities are integrally and proximately related to the whole, but also recognizes that many activities are undertaken in segregable phases that are distinct in purpose, time, or place. All three elements must be consistent for the activity to be considered a single “project.”

Purpose: Is the purpose for the funded activity segregable? For example, a grant for improvements to public transit infrastructure is awarded for \$50 million. The recipient plans to fund \$10 million each in

⁶ The PTP test has been used in other similar applications, e.g., by the Department of Labor for applicability of Davis Bacon labor standards and by the EPA in defining a “project” under the American Iron and Steel requirements that apply to the Clean Water State Revolving Fund and Drinking Water State Revolving Fund programs and the Water Infrastructure Finance and Innovation Act program. See, Department of Labor Memorandum dated May 29, 2009, titled “Applicability of Davis-Bacon labor standards to federal and federally-assisted construction work funded in whole or in part under provisions of the American Recovery and Reinvestment Act of 2009” (DOL ARRA DB Memorandum)

subawards to 5 different subrecipients for different types of transit projects. The purpose of the financial assistance to each subrecipient is distinct and each subaward would be considered distinct “projects” for BABA compliance.

Time: Is the timing of the funded activity distinct? For example, in FY24, a state receives a grant to implement air monitoring in disadvantaged communities throughout the state. In FY25, the state receives grant from an OEJECR program for bike lane improvements in the same disadvantaged communities. These are both distinct in purpose and time and would be distinct “projects.”

Place: Is the location of the funded activity distinct? A local government receives a grant from an OEJECR program. The recipient plans to use this funding to fund stormwater infrastructure improvements in two different disadvantaged communities. Each project funding agreement has unique structural requirements, and each project has location-specific requirements. The place of the activity is distinct and would be considered separate “projects.”

How do I know if my project is “publicly owned”?

Generally, the project may be “publicly owned” when the recipient is a governmental entity (e.g., federal, state, county, municipality). Publicly owned property does not necessarily provide access to members of the general public.

Do BABA requirements apply to federal financial assistance provided to eligible private entities for a project solely for private use?

No, eligible private entities receiving assistance for projects solely designated for private use are not “infrastructure” covered by BABA. According to the OMB Guidance M-24-02, when determining if a particular type of construction project will meet the definition of “infrastructure” under BABA, OMB recommends that “[p]rojects consisting solely of the purchase, construction, or improvement of a private home for personal use, for example, would not constitute an infrastructure project for purposes of BABA.” This would include the private portion of a lead service line replacement, where the private single-family homeowner is not receiving any financial assistance from the water system to replace their portion of the lead service line. Similarly, a project adding solar panels, battery storage, or electric vehicle chargers to private residences for the exclusive benefit of the owners/residents would not be subject to BABA.

If I am a subrecipient, but I contract with an entity, does BABA still apply?

Yes. The BABA requirements attach to the funding. Subawards are required conform to the terms and conditions of the Federal award from which they flow. For example, if a subrecipient hires a contractor for a project that would be considered “infrastructure,” this would trigger BABA requirements, unless a waiver is applied. The subrecipient through their contractor would need to make sure that the products incorporated into the project were made domestically in accordance with BABA requirements.

Does BABA apply to no cost amendments?

No. No-cost amendments (i.e., no additional funding is added) do not trigger the addition of a BABA term and condition for a project that is not otherwise subject to BABA.

Would federally funded infrastructure projects outside of the United States need to comply with the BABA requirements?

No. According to the OMB Guidance (M-24-02), an “infrastructure project” is defined as “...any activity related to the construction, alteration, maintenance, or repair of infrastructure in the United States regardless of whether infrastructure is the primary purpose of the project.” Therefore, the BABA

requirements are not implicated for infrastructure projects occurring outside of the United States, such as projects funded through the United States-Mexico-Canada Agreement with infrastructure activities occurring in Mexico or Canada (that is, outside the United States). U.S. territories are considered part of the United States.

Are products and materials that purposefully decay or decompose considered permanent items that are subject to the BABA requirements?

No, BABA requirements do not apply to purposefully decaying and decomposing items not intended to be permanent or incorporated into a structure.

If most of the project is BABA compliant, and a small portion is not, can an assistance recipient self-fund (i.e., paying with non-federal dollars) the non-compliant products?

No. Any infrastructure project that is funded in whole or in part with federal assistance must comply with the BABA requirements, unless the requirements are otherwise waived. All iron, steel, manufactured products, and construction materials used in an infrastructure project must meet the BABA requirements unless waived. Absent a waiver, there is no “small portion” or product that does not need to satisfy the BABA requirements unless the requirements are waived or specifically excluded (e.g., cement and cementitious materials; aggregates such as stone, sand, or gravel; aggregate binding agents or additives; or non-permanent products). An assistance recipient may request a waiver or inquire as to whether a broad waiver, such as a *de minimis* or small projects waiver, might apply. Please review the EPA website for an updated list of approved waivers: <https://www.epa.gov/cwsrf/build-america-buy-america-baba-approved-waivers>.

SECTION 3: PRODUCT COVERAGE

What are the categories of products covered under BABA?

Under BABA, unless excepted, an article, material, or supply should only be classified into one of the following categories: (1) iron or steel products; (2) manufactured products; (3) construction materials; or (4) section 70917(c) materials.

An article, material, or supply should not be considered to fall into multiple categories. In some cases, an article, material, or supply may not fall under any of the above-listed categories. The classification of an article, material, or supply as falling into one of the categories listed in this paragraph must be made based on its status at the time it is brought to the work site for incorporation into an infrastructure project. The work site is the location of the infrastructure project at which the iron, steel, manufactured products, and construction materials will be incorporated.

What does iron and steel mean?

Per 2 CFR 184.3 and OMB M-24-02, a material will fall into the iron and steel category if it is wholly or “predominantly made of iron or steel or a combination of both.” “Predominantly of iron or steel or a combination of both” means that the cost of the iron and steel content exceeds 50 percent of the total cost of all its components. The cost of iron and steel is the cost of the iron or steel mill products (such as bar, billet, slab, wire, plate, or sheet), castings, or forgings utilized in the manufacture of the product and a good faith estimate of the cost of iron or steel components.

For iron and steel products, does a manufacturer need to demonstrate compliance from initial melting through the finished product (including coatings)?

For iron and steel products, the BABA requirements are that all of the iron and steel in a covered product (that is, the product is comprised of more than 50 percent iron and steel by material cost) must be melted and poured in the United States and all subsequent manufacturing processes (such as grinding, rolling, bending, reheating, casting, and coating) must occur in the United States.

For products made of iron and steel, what is the difference between predominantly and primarily iron and steel?

EPA considers the terms “predominantly” and “primarily” to be interchangeable, such that a product is considered predominantly (or primarily) iron and steel if it contains greater than 50 percent iron and steel by material cost.

What is the definition of construction materials (with examples)?

From OMB’s 2 CFR 184.3: “construction materials” include an article, material, or supply (other than an item of primarily iron or steel; a manufactured product; cement and cementitious materials; aggregates such as stone, sand, or gravel; aggregate binding agents or additives; or non-permanent products) that is or consists primarily of:

- non-ferrous metals,
- plastic and polymer-based products (including polyvinylchloride, composite building materials, and polymers used in fiber optic cables),
- glass (including optic glass),
- fiber optic cable (including drop cable);
- optical fiber;

- Lumber
- engineered wood, or
- drywall.

Construction materials do not include items that have been classified as iron or steel or a manufactured product. Minor additions of articles, materials, supplies, or binding agents to a construction material do not change the categorization of the construction material. The term “construction material” also excludes cement and cementitious materials; aggregates such as stone, sand, or gravel; aggregate binding agents or additives. Temporary construction materials that are not permanently affixed are not subject to BABA.

Two or more construction materials that have been combined together through a manufacturing process, and items that include at least one of the above listed materials combined with a material that is not listed combined through a manufacturing process, should be considered a manufactured product.

For example, a plate of glass would be a construction material under BABA, but a framed window that incorporates the glass into a frame would be a manufactured product. Another common construction material for infrastructure projects would be polyvinyl chloride (PVC) pipe and fittings. However, if PVC components are incorporated into a more complex product such as instrumentation and control equipment or a water treatment unit, those items would be manufactured products.

What are the specific BABA requirements for construction materials?

Per 2 CFR 184.6, each construction material has specific standards for the material to be considered “produced in the United States,” as listed in the table below:

Construction Material	“Produced in the U.S.” means all manufacturing processes occurred in the U.S.
Non-ferrous metals	From initial smelting or melting through final shaping, coating, and assembly
Plastic and polymer-based products	From initial combination of constituent plastic or polymer-based inputs, or, where applicable, constituent composite materials, until the item is in its final form
Glass	From initial batching and melting of raw materials through annealing, cooling, and cutting
Fiber optic cable	From the initial ribboning (if applicable), through buffering, fiber stranding and jacketing
Optical fiber	From the initial preform fabrication stage through the completion of the draw
Lumber	From initial debarking through treatment and planing
Drywall	From initial blending of mined or synthetic gypsum plaster and additives through cutting and drying of sandwiched panels
Engineered wood	From the initial combination of constituent materials until the wood product is in its final form

What are manufactured products (with examples)?

From OMB’s 2 CFR 184.3: “Manufactured products means: (1) Articles, materials, or supplies that have been: (i) Processed into a specific form and shape; or (ii) Combined with other articles, materials, or supplies to create a product with different properties than the individual articles, materials, or supplies.”

Manufactured products do not include items classified as iron or steel, a construction material, or a section 70917(c) material. However, a manufactured product may include components that are construction materials, iron or steel products, or section 70917(c) materials.

The manufactured products category is anticipated to cover the majority of potential infrastructure products, including complex products made up of a variety of material types and components. Common manufactured products include, but not be limited to, solar panels, electric vehicle chargers, heating/ventilation/air conditioning (HVAC) systems, batteries, anaerobic digesters, irrigation systems, lighting, heat pumps, motors, generators, instrumentation and control systems, gauges, meters, monitoring/measurement equipment, electrical systems, monitoring and filtration systems, and many other mechanical and electrical items.

From OMB Guidance M-24-02: “...all manufactured products used in the project are produced in the United States—this means the manufactured product was manufactured in the United States; and the cost of the components of the manufactured product that are mined, produced, or manufactured in the United States is greater than 55 percent of the total cost of all components of the manufactured product, unless another standard for determining the minimum amount of domestic content of the manufactured product has been established under applicable law or regulation...”

OMB’s guidance in 2 CFR 184.5 provides instructions for determining the cost of components for manufactured products based on whether the components are purchased or manufactured by the manufacturer.

Which category will certain items fall under for BABA?

In accordance with OMB’s 2 CFR 184.4(e), an article, material, or supply should be classified into only one of the four categories: iron and steel, manufactured products, construction materials, or Section 70917(c) materials. Section 70917(c) materials means cement and cementitious materials; aggregates such as stone, sand, or gravel; or aggregate binding agents or additives. A manufactured product may include components that are construction materials, iron or steel products, or section 70917(c) materials.

What are “Section 70917(c) materials”?

Section 70917(c) materials refer to cement and cementitious materials; aggregates such as stone, sand or gravel; or aggregate binding agents or additives. Section 70917(c) materials are not construction materials and are not subject to BABA requirements.

Does EPA have a list of products to be classified as “Iron and Steel” under BABA?

Although this list is not comprehensive, EPA has identified the products listed in Appendix 4 as primarily (more than 50 percent) of iron and/or steel by materials cost.

Does EPA have a list of products that could be made “primarily” of iron and steel but would be classified as “manufactured products” under BABA?

Although this list is not comprehensive, EPA has identified the products in Appendix 5 as considered “manufactured products” under the BABA requirements, even if the item might be composed primarily of iron and steel by materials cost.

Is asphalt paving a covered product under BABA?

No. EPA interprets Section 70917(c) of the IJA to exclude asphalt from BABA requirements. Asphalt paving is a type of concrete composed of an aggregate material mixed with a binder (bitumen).

SECTION 4: IMPLEMENTATION (COMPLIANCE AND ENFORCEMENT)

Who is responsible for BABA compliance and enforcement?

Responsibility for BABA implementation applies at all levels, from manufacturers to suppliers and distributors, construction contractors, assistance recipients, and funding authorities.

The manufacturers have responsibility to provide adequate and accurate documentation of the products manufactured. If suppliers and distributors are involved, they are responsible for passing along compliance documentation for products supplied to projects that are subject to the BABA requirements.

It is the assistance recipient's responsibility to ensure compliance with the BABA requirements. The assistance recipient and their representatives are primarily responsible for ensuring the documentation collected for products used on the project is sufficient to document compliance with the BABA requirements. This includes maintaining documentation showing the appropriate compliance and use of any waivers. Recipients are strongly advised to conduct site visits of projects during construction and review documentation demonstrating the assistance recipient's proof of compliance. Observed best practices typically include a meeting early in the process (sometimes before bid and usually prior to commencing construction) and at least one project site visit during the construction process.

The funding authority is responsible for providing oversight and guidance as needed to ensure the proper implementation of the requirements. The Uniform Grants Guidance (UGG) (Title 2 of the Code of Federal Regulations (CFR) Part 200) applies to many federal financial assistance agreements that will include BABA requirements. The general provisions of 2 CFR Part 200 determine the responsible party for the grant funding authority.

At all levels, where fraud, waste, abuse, or any violation of the law is suspected, the Office of Inspector General (OIG) should be contacted immediately. The OIG can be reached at 1-888-546-8740 or OIG_Hotline@epa.gov. More information can be found at this website: <http://www.epa.gov/oig/hotline.htm>.

When will the BABA requirements be assessed for compliance? Do assistance recipients need to have waivers for potential non-domestic products before assistance agreements are in place, at the time products are procured or products are incorporated into the project (i.e., used)?

Compliance is assessed when the domestic product is used (or installed) at the project site. Proper compliance documentation, such as a BABA certification letter issued by a manufacturer or a waiver, should accompany a product prior to its "use," in accordance with Section 70914(a) of IJIA. The collection of compliance records may occur prior to assistance agreements being in place but is not necessary. Additionally, communication of BABA requirements through appropriate Terms and Conditions in financial assistance agreements and in project solicitation and contract documents is key in ensuring all parties involved are informed of the requirements for the project before construction is underway.

Will EPA provide documentation for BABA for bid solicitations and suggested contract language? Will EPA provide suggested language for Assistance Agreements?

See Appendix 1, which includes suggested language for construction contracts to address the BABA requirements. In addition to the language suggested in Appendix 1, EPA also recommends that assistance recipients prepare contract bid solicitation documents with a statement for the consulting engineers and construction firms as follows: "By signing payment application and recommending payment, Contractor certifies they have reviewed documentation for all products and materials submitted for payment, and the certifications are sufficient to demonstrate compliance with Build

America, Buy America Act requirements.” In most cases, the assistance recipient’s representatives assume the responsibility for their clients to conduct due diligence on compliance with applicable domestic preference requirements.

All federal financial infrastructure assistance agreements subject to BABA must have a clause requiring compliance with the requirements. See Appendix 2 for example assistance agreement language.

How can product compliance with the BABA requirements be demonstrated?

Assistance recipients and their representatives should ensure that the products delivered to the construction site are accompanied by proper documentation that demonstrates compliance with the law and can be made available to the funding authority upon request. The documentation may be received and maintained in hard copy or electronically, or could be embedded in construction management software. The use of a signed certification letter from the manufacturer for the project is the most direct and effective form of compliance documentation for ensuring products used on site are BABA-compliant prior to their installation; however, other forms of documentation are also acceptable as long as collectively, the following can be demonstrated:

1. Documentation linked to the specific project. For example, this can be in the form of the project name, project location, contract number, or project number.
2. Documentation linked to the product used on the project. For example, description of product(s) (simple explanation sufficient to identify the product(s)), or an attached (or electronic link to) purchase order, invoice, or bill of lading.
3. Documentation includes statement attesting that the products supplied to the assistance recipient are compliant with BABA requirement. Reference to the Infrastructure Investment and Jobs Act (“IIJA”) or the Bipartisan Infrastructure Law (BIL) are also acceptable. For iron and steel items under BABA, references to the American Iron and Steel (AIS) requirements are also acceptable and reciprocal with BABA for such items.
4. Documentation that manufacturing occurred in the United States, which could include, for example, the location(s) of manufacturing for each manufacturing step that is being certified. It is acceptable for manufactured products to note a single point of manufacturing, documenting that the final point of manufacturing is in the United States. *(Note: each BABA category may require different determinations for compliance.)*
5. Signature of company representative (on company letterhead and signature can be electronic). The signatory of the certifying statement affirms their knowledge of the manufacturing processes for the referenced product(s) and attests that the product meets the BABA requirements.

(Note: A country of origin stamp alone is not sufficient verification of compliance with BABA and assistance receipts should not rely on it to ensure compliance.)

In addition to compliance documentation, assistance recipients or their representatives should also conduct a visual inspection of the product when it arrives to the project site, especially for iron and steel products which are often stamped with the country of origin.

EPA may develop alternative procedures for demonstrating compliance. Additional project- or program-specific instructions may be developed on a case-by-case basis in order to meet individual circumstances.

Will EPA provide a form or template for tracking and documenting compliance?

EPA does not require a specified format for tracking or documenting compliance. Assistance recipients are free to develop any system (from simple to complex software) for tracking items used on the project and the accompanying compliance documentation, e.g., certification letters, applicable waivers, if it helps with implementation and compliance. Elements that may help with keeping track of compliance may include: product description, quantity required/used, product category (i.e., iron and steel, manufactured product, or construction material), status of obtaining certification letter, product cost, and whether the item might qualify as *de minimis*, or qualify under another applicable waiver.

Are recipients responsible for their contractors' compliance with BABA?

BABA requirements must flow down to contractors. When work is put out to bid, it is the responsibility of the recipient to write compliance requirements into their agreements, and it is the responsibility of the contractors to meet those agreements.

What is the responsibility of manufacturers in complying with BABA?

Manufacturers who want to claim they are BABA compliant need to provide signed certification documents. Manufacturers are not required to disclose exact percentages or other details about their products as this is confidential financial information. EPA may perform compliance checks if there is a reason to suspect non-compliance, and if it is found that a manufacturer has not fulfilled their compliance obligations the grant recipient will not be held responsible or faulted for having used their products. If certification fraud is suspected, please contact EPA's Office of Inspector General (OIG) at 1-888-546-8740 or OIG_Hotline@epa.gov. More information can be found at the OIG Hotline website (<http://www.epa.gov/office-inspector-general/epa-oig-hotline>).

If a manufacturer claims to comply with the Buy American Act, does it also comply with BABA?

With the exception of the AIS requirements – which EPA interprets to be equivalent to the “iron and steel” requirements under BABA – EPA does not have an interpretation about the comparability of other domestic preference requirements relative to BABA. Any products that are to be certified as compliant with BABA should include a specific reference to the BABA requirements and appropriate attestation from a responsible manufacturing company official.

Is there a master list of manufacturers, suppliers, or products that are BABA compliant?

Unfortunately, keeping a master list of BABA-compliant products is not feasible due to the number of products and how often products change. If a recipient is unable to find a BABA-compliant product from a supplier and believe they may need a waiver, please contact the OEJECR BABA inbox at BABA-OEJECR@epa.gov for assistance with market research.

How will assistance recipients manage certification letters for every product used in an infrastructure project?

EPA recognizes that the new BABA requirements will cover most products used in typical infrastructure projects, and that the number of items that may require certification at large and/or complex projects may reach several hundred. EPA recommends that projects with a high number of potentially covered products meet with their funding authority about potential compliance strategies to minimize burden and streamline compliance activity. Assistance recipients should prepare contract bid solicitation documents with a statement for the consulting engineers and construction firms as follows: “By signing payment application and recommending payment, Contractor certifies they have reviewed documentation for all products and materials submitted for payment, and the documentation is

sufficient to demonstrate compliance with Build America, Buy America Act requirements.” In most cases, the assistance recipient’s representatives may assume the responsibility for their clients to conduct due diligence on compliance with applicable domestic preference requirements.

Who is responsible for documenting the 55 percent content requirement for manufactured products under BABA? What if the final manufacturer cannot trace or verify domestic origin for all components?

The manufacturer who signs a certification letter is responsible for documenting compliance with any of the three categories of products (iron and steel, manufactured products, or construction materials). For manufactured products, BABA requires that greater than 55 percent of the total cost of all components of the manufactured product be from domestic sources. EPA recommends that the certification letter for manufactured products documents whether the item passes the content test in the final product along with a statement attesting to compliance with the BABA requirements for manufactured products.

How do final product fabricators document compliance when the final step of manufacturing may be simply assembling components?

It is acceptable, in many cases, especially for highly complex manufactured products that utilize many sub-components, for the final point of assembly to certify without using a “step certification” process. Multiple certifications (i.e., step certifications) or a singular certification can be used for a product, as long as the certifying official is willing to attest to the product’s compliance with BABA requirements at all stages of manufacturing.

Will Material Test Reports be acceptable in lieu of a BABA certification for iron and steel?

Material Test Reports (MTRs, commonly referred to as “Mill Certifications” or “Mill Certs”) provide the chemical composition of steel and iron from a mill or foundry. If an MTR accompanies the delivery of steel or iron to a project site with an invoice or bill of lading, EPA will consider it sufficient to demonstrate compliance (equivalent to a certification letter) as long as the MTR includes a manufacturer representative’s signature in addition to the location (city and state) of the mill/foundry. It is common for MTRs to be the first letter in a “step certification” if the product is further fabricated or painted, etc., by another manufacturer.

Can a manufacturer use a fillable certification letter for products?

EPA recommends that certifications be signed by representatives of the manufacturing entity. EPA does not oppose manufacturers using forms to internally develop letters within their company, thereby providing signed, non-manipulable certification letters to suppliers, distributors, and/or assistance recipients. A fillable form that can be changed by someone outside of the manufacturer after signature does not demonstrate compliance and may create compliance concerns for the manufacturer or assistance recipient.

Are product certifications from suppliers and distributors allowed?

EPA recommends that representatives of product manufacturers certify compliance and discourages suppliers and distributors from creating certification letters. EPA does not rule out the possibility that a third-party certification process, such as a certification by a distributor, may be viable. However, EPA is currently not aware of a system or proposed system that meets the EPA’s recommendations for documentation of product certification.

How long should assistance recipients keep compliance documentation?

Assistance recipients should apply recordkeeping requirements for the project according to the procedures dictated by the funding authority. For most EPA grant programs, this is prescribed in the Uniform Grants Guidance at 2 CFR 200.334-200.338. Often, records must be kept for at least 3 years after project closeout.

SECTION 5: IMPLEMENTATION (WAIVERS)

Are Federal agencies able to waive BABA requirements?

EPA is committed to implementing BABA requirements. OMB's guidance in M-24-02 clarifies that Federal awarding agencies can waive BABA requirements if: 1) applying the Buy America Preference would be inconsistent with public interest (a "public interest waiver"); 2) types of iron, steel, manufactured products, or construction materials are not produced in the United States in sufficient and reasonably available quantities or of a satisfactory quality (a "nonavailability waiver"); or 3) the inclusion of iron, steel, manufactured products, or construction materials produced in the United States will increase the cost of the overall infrastructure project by more than 25 percent (an "unreasonable cost waiver").

Are there waivers that might apply to my project?

There are agency-wide, program-wide, product-specific, and project-specific waivers. EPA has issued several agency-wide waivers that may be applicable to certain projects funded by OEJECR programs. The information below is subject to change and will be updated as additional waivers are developed. Recipients are encouraged to review the EPA BABA website for the latest information <https://www.epa.gov/cwsrf/build-america-buy-america-baba>. Current agency-wide waivers as of the date of these implementation procedures are provided in Appendix 7.

What should I do if I'm covered by a program-wide or agency-wide waiver? Do I need to maintain documentation?

If you believe your award or project is covered by a program-wide or agency-wide waiver, please contact your project officer and provide your rationale. The project officer will respond with either an affirmative or negative response. Both the project officer and the recipient will retain that communication with their records.

For example, a recipient may seek to apply the small grants waiver. The recipient would send an email to the project officer citing the award amount as their rationale. The project officer would respond that they agree the small grants waiver applies to this award. Recipient and project officer retain this communication within their grant files.

(Note: Subaward and loan recipients should work with the primary grant recipient. The primary recipient will work with EPA to determine the applicability of waivers. Subaward or loan recipients should also retain communications for their records.)

Project officers should coordinate with their headquarters contact or submit a question to BABA-OEJECR@epa.gov, if there is any ambiguity. Recipients may also submit questions to BABA-OEJECR@epa.gov, if they have questions or disagree with the determination made by the project officer.

Who may apply for a waiver and how do you apply?

Assistance recipients and their authorized representatives may apply for a project-specific waiver. EPA does not accept waiver requests from suppliers, distributors, or manufacturers unless the assistance recipient endorses and submits the request on its own behalf to the funding authority. In the case where multiple programs are providing federal funds to the project, the assistance recipient should submit the waiver request to the cognizant program, which is the one providing the greatest amount of federal funds for the project. See Appendix 3 for detailed steps.

Project-specific waiver requests should generally include: (1) a brief summary of the project, (2) a description and explanation of the need for the waiver for the product(s) in question, (3) a brief summary of the due diligence conducted in search of domestic alternatives (which could include correspondence between assistance recipient and supplier/distributors), (4) the quantity and materials of the product(s) in question, (5) all engineering specifications and project design considerations relevant to the product(s) in question, (6) the approximate unit cost of items (both foreign and domestic) in addition to an estimated cost of the materials and overall project, (7) the date any products will be needed on site in order to avoid significant project schedule disruptions, and (8) any other pertinent information relevant to EPA's consideration of the waiver (e.g., the date the plans and specifications were submitted to the state, the date of construction initiation, expected date of project completion, any special considerations such as local zoning and building ordinances, seismic requirements, or noise or odor control requirements).

If a product is not readily available domestically, will EPA provide product waivers?

EPA will address the unavailability of domestic products through the waiver process, including project-level and potential national short-term waivers for specific products, if appropriate. To the extent practicable and with the intent to maximize domestic market and supply chain development, EPA intends to address issues of broad product unavailability with targeted, time-limited, and conditional waivers, as prescribed in OMB Guidance M-24-02. EPA will follow its robust and thorough product market research processes to identify and verify domestic nonavailability for those products for which proposed national/general applicability waivers may be appropriate.

If compliance with BABA will increase the costs of my project, can I seek a waiver? What information is needed to justify a waiver based on unreasonable costs?

If the cost of compliance with BABA will increase the overall project cost by more than 25 percent, a recipient may seek a project-level "unreasonable cost waiver." As part of the waiver request, the assistance recipient must demonstrate that implementation of the BABA requirements will increase the overall project cost more than 25 percent. Depending on the circumstances of the overall project cost increases, documentation to justify the cost waiver can vary but may include itemized cost estimates or bid tabulations comparing project costs with and without BABA implementation. Assistance recipients should begin assessing the potential cost impacts of the BABA requirements during the design phase of a project.

Can administrative costs associated with tracking and verification of certifications be considered when determining if the cost of a project increases by 25 percent or more?

Yes. Section 70914(b)(3) of the IIJA states that a waiver may be provided if the overall cost of the project increases by more than 25 percent due to the "inclusion of iron, steel, manufactured products, or construction materials produced in the United States." EPA interprets this to mean that the "inclusion" of the BABA-covered products could encompass reasonable administrative costs associated with complying with the BABA requirements, such as staff, contractor, and technological resources to collect and track BABA compliance documentation.

Can an assistance recipient request a waiver based on a specification written for a specific brand or model of product (that is, a specification that names a branded item or model)?

In most cases, performance-based specifications are expected and required for the majority of infrastructure projects funded by EPA's financial assistance programs. In rare cases where "branded" or product-specific sourcing may be included in project specifications, it is suggested that the specifications include the item in question (that is, not simply a catalog page, but also materials of construction, sizing,

quantities, and applicable engineering performance design characteristics for the project, etc.) in addition to the standard phrase “or equal.” For the purposes of product alternative market research, EPA will evaluate the BABA requirements based on performance-based engineering specifications for the product(s) in question. If the project’s specifications do not include performance-based specifications, or at least an “or equal” designation, EPA will base its research on an “or equal” designation using best professional judgment to the extent practicable.

How can assistance recipients and construction contractors address product delivery delays?

Assistance recipients should reasonably plan for material procurement to account for known potential supply chain issues or extended lead times and shall notify the funding authority well in advance of the issues so that prompt attention can be given to explore options. Where extended lead times for compliant products are impacting project schedules and may significantly impact construction progress, timely communication with the funding agency is important. For products that are unavailable within a reasonable timeframe to meet the objectives and schedule of a project, EPA may consider a non-availability waiver with adequate justification. An assistance recipient would need to apply for the waiver and, if applicable, contact the direct recipient of EPA funding) to initiate the waiver process.

Do waivers need to be approved before the award is granted?

The project award can be granted prior to receiving waiver approval; however, the waiver must be approved prior to any funds being spent on products that would be covered by that waiver.

Do individual applicants need to apply to use the De Minimis waiver?

The EPA-wide De Minimis waiver is already approved and available for any EPA-funded grant. This waiver allows the recipient to not demonstrate BABA compliance on products up to 5% of project costs. Individual recipients do not need to request or go through an approval process or ask permission to use this waiver. However, recipients are encouraged to check in with their project officers and notify them that they planning to use this waiver.

SECTION 6: CO-FUNDING

If projects are co-funded with funding mechanisms that do not require BABA, must the entire project comply with BABA?

Any public infrastructure project that is funded in whole or in part with federal assistance must comply with the BABA requirements, unless the requirements are otherwise waived. A “project” consists of all construction necessary to complete the building or work regardless of the number of contracts or assistance agreements involved so long as all the contracts and assistance agreements awarded are closely related in purpose, time, and place. This precludes the intentional splitting of projects into separate and smaller contracts or assistance agreements to avoid BABA applicability on some portions of a larger project, particularly where the activities are integrally and proximately related to the whole. However, there are many situations in which major construction activities are clearly undertaken in separate phases that are distinct in purpose, time, or place, in which case, separate contracts or assistance agreements would carry separate requirements.

How will project requirements be determined for co-funded projects subject to different programmatic or waiver conditions?

OMB Guidance M-24-02 addresses cases with project co-funding from separate federal programs. EPA would apply the guidance’s “cognizant agency” determination to projects that are co-funded with different general applicability/programmatic waivers. For instance, if a project were co-funded between EPA and HUD and the majority of the federal funding for the project is from EPA, then EPA would be the “cognizant” agency for application and determination of waivers. In that case, any conditions from an applicable EPA waiver would apply.

When a project receives funding from multiple EPA assistance programs, how will the agency determine which waivers apply?

Generally, EPA will apply the “cognizant agency” approach to the relevant EPA programs that contribute funding to the project. Recognizing that funding from multiple EPA assistance programs may come at varying timelines for a project, EPA will use its discretion with respect to applicable waivers to ensure consistency in BABA implementation without unnecessary disruption to a project. For example, if a project is already operating under a waiver and receives additional funding from another EPA program, the original waiver will continue to apply to the project.

When a project receives funding from Federal assistance programs in multiple agencies (e.g., EPA and USDA; EPA, FEMA, and DOT), how will potentially different waivers be implemented?

Recognizing that sources of federal funding may come at varying timelines for a project, additional coordination will be needed between multiple funding agencies to ensure consistent implementation of BABA requirements. An assistance recipient should inform the EPA program when other federal programs are also funding or will fund the project so that EPA can coordinate with those co-funding agencies and determine the optimal implementation approach for the waivers without unnecessary disruption to the project.

When a project receives funding from multiple assistance programs (within EPA or from separate agencies), which agency provides oversight for BABA implementation?

OMB Guidance M-24-02 says: “the Federal agency contributing the greatest amount of Federal funds for the project should be considered the Cognizant Agency for Made in America (“Cognizant Agency”) and may take responsibility for coordinating with the other Federal awarding agencies.” Section VII, p.8 (emphasis added). Although the M-24-02 guidance only addresses BABA waivers received for projects

with funding from separate federal agencies, EPA will apply the Cognizant Agency concept to other BABA implementation activities for a project if it helps minimize duplicative efforts among agencies and reduce the burden on recipients. In those cases, the Cognizant Agency will be responsible for oversight activities, such as providing BABA general provisions for contracts, oversight of certification of products, and inspection and field oversight of projects. Where situations arise that adhering to the Cognizant Agency concept would reasonably increase the potential for burden or significantly delay a project, agencies may coordinate with another agency to perform the oversight activities.

When does Cognizant Agency apply to waivers?

The Cognizant Agency concept applies to waiver requests submitted for co-funded projects, funded by separate federal agencies and applicable only to recipient-submitted waiver requests. OMB Guidance M-24-02 addresses this question only with respect to receiving and processing multiple waiver requests from projects co-funded across different Federal agencies in order to avoid duplicative efforts (i.e., the Cognizant Agency concept in Section VII, pg. 8 of OMB Guidance M-24-02).

SECTION 7: MISCELLANEOUS

How do international trade agreements affect the implementation of the BABA requirements?

The BABA requirements apply in a manner consistent with United States obligations under international trade agreements. Typically, these obligations only apply to direct procurement by the entities that are signatories to these trade agreements. In general, assistance recipients are not signatories to such agreements, so these trade agreements have no impact on BABA implementation. In the few instances where such an agreement applies to a municipality, that municipality is responsible for determining its applicability and requirements and communicating with the funding authority (such as EPA and/or a state) on the actions taken to comply with BABA.

What if the project is primarily private infrastructure but includes a connection to a public system?

If a project is only affecting private infrastructure such as a private home for private use, then BABA would not apply. However, if a connection is being made to a public system, such as a connection to a public water line, then that connection is considered public infrastructure and BABA would apply. This type of case may depend on the specifics of the project. We recommend further discussion with EPA on a case-by-case basis.

Is there a minimum project amount that requires BABA compliance?

BABA applies to projects of any size; however, EPA has a small grants waiver that waives requirements for awards or subawards with a total under \$250,000. It is important to note that waivers are a method of complying with BABA requirements, rather than an indication that compliance is not required.

APPENDIX 1: EXAMPLE CONSTRUCTION CONTRACT LANGUAGE FOR BABA

ALL CONSTRUCTION CONTRACTS MUST HAVE A CLAUSE REQUIRING COMPLIANCE WITH THE BABA REQUIREMENTS. THIS IS AN EXAMPLE OF WHAT COULD BE INCLUDED IN A PROJECT'S CONSTRUCTION CONTRACT. EPA MAKES NO CLAIMS REGARDING THE LEGALITY OF THIS CLAUSE WITH RESPECT TO STATE OR LOCAL LAW:

The Contractor acknowledges to and for the benefit of the _____ ("Owner") and the _____ (the "Funding Authority") that it understands the goods and services under this Agreement are being funded with federal monies and have statutory requirements commonly known as "Build America, Buy America;" that requires all of the iron and steel, manufactured products, and construction materials used in the project to be produced in the United States ("Build America, Buy America Requirements") including iron and steel, manufactured products, and construction materials provided by the Contractor pursuant to this Agreement. The Contractor hereby represents and warrants to and for the benefit of the Owner and Funding Authority (a) the Contractor has reviewed and understands the Build America, Buy America Requirements, (b) all of the iron and steel, manufactured products, and construction materials used in the project will be and/or have been produced in the United States in a manner that complies with the Build America, Buy America Requirements, unless a waiver of the requirements is approved, and (c) the Contractor will provide any further verified information, certification or assurance of compliance with this paragraph, or information necessary to support a waiver of the Build America, Buy America Requirements, as may be requested by the Owner or the Funding Authority. Notwithstanding any other provision of this Agreement, any failure to comply with this paragraph by the Contractor shall permit the Owner or Funding Authority to recover as damages against the Contractor any loss, expense, or cost (including without limitation attorney's fees) incurred by the Owner or Funding Authority resulting from any such failure (including without limitation any impairment or loss of funding, whether in whole or in part, from the Funding Authority or any damages owed to the Funding Authority by the Owner). If the Contractor has no direct contractual privity with the Funding Authority, as a lender or awardee to the Owner for the funding of its project, the Owner and the Contractor agree that the Funding Authority is a third-party beneficiary and neither this paragraph (nor any other provision of this Agreement necessary to give this paragraph force or effect) shall be amended or waived without the prior written consent of the Funding Authority.

APPENDIX 2: EXAMPLE ASSISTANCE AGREEMENT LANGUAGE FOR BABA

ALL FEDERAL FINANCIAL INFRASTRUCTURE ASSISTANCE AGREEMENTS MUST HAVE A CLAUSE REQUIRING COMPLIANCE WITH THE BABA REQUIREMENTS. THIS IS AN EXAMPLE OF WHAT COULD BE INCLUDED IN AN ASSISTANCE AGREEMENT (E.G., SRF LOAN AGREEMENT). EPA MAKES NO CLAIMS REGARDING THE LEGAL SUFFICIENCY OF THIS CLAUSE WITH RESPECT TO STATE LAW:

Comply with all federal requirements applicable to the assistance received (including those imposed by the Infrastructure Investment and Jobs Act (“IIJA”), Public Law No. 117-58) which the Participant understands includes, but is not limited to, the following requirements: that all of the iron and steel, manufactured products, and construction materials used in the Project are to be produced in the United States (“Build America, Buy America Requirements”) unless (i) the Participant has requested and obtained a waiver from the cognizant Agency pertaining to the Project or the Project is otherwise covered by a general applicability waiver; or (ii) all of the contributing Agencies have otherwise advised the Participant in writing that the Build America, Buy America Requirements are not applicable to the Project.

Comply with all record keeping and reporting requirements under all applicable legal authorities, including any reports required by the funding authority (such as EPA and/or a state), such as performance indicators of program deliverables, information on costs and project progress. The Participant understands that (i) each contract and subcontract related to the Project is subject to audit by appropriate federal and state entities and (ii) failure to comply with the applicable legal requirements and this Agreement may result in a default hereunder that results in a repayment of the assistance agreement in advance of the maturity of the Bonds, termination and/or repayment of grants, cooperative agreements, direct assistance or other types of financial assistance, and/or other remedial actions.

APPENDIX 3: PROJECT EXAMPLES THAT WOULD CLEARLY REQUIRE BABA COMPLIANCE OR WOULD CLEARLY NOT TRIGGER BABA

- 1) A city receives a grant to build a new recycling sorter. The project will include the purchase of the sorter (cost of \$500,000) and the construction of a structure to house the sorter (\$100,000). The new sorter will be used by the county contractors that are hired to collect the community's recycling.
- Does the project involve construction, alteration, or repair of a building or real property?
Yes.
 - Is the project publicly owned or serve a public function? Yes, the project is both publicly owned and will serve a public function.
 - Does the project involve leaving iron, steel, manufactured goods or construction materials permanently affixed to the property? Yes, the city is using construction materials that will be permanently affixed to the land, and have purchased a manufactured product that will be permanently affixed to the structure.

Because the project would involve construction of real property that serves a public function and leaves relevant materials permanently affixed, BABA would apply.

- 2) A project received funding to install energy-efficient heating and cooling systems in private homes for personal use.
- Does the project involve construction, alteration, or repair of a building or real property?
Yes
 - Is the project publicly owned or serve a public function? No, the project only serves individual residents

Because the project does not serve a public function, BABA would not apply.

- 3) A tribe receives funding to upgrade their tribal community center with wildfire resilience strategies, such as air filtration devices and flame-resistant construction materials and coatings. The grant is for \$500,000. \$100,000 is for overhead costs (e.g., salaries) and \$400,000 will be to hire a contractor to remove existing flammable materials and install the air filtration devices and new materials. The contractor is donating his labor costs.
- Does this project involve the construction, alteration or repair of a building or real property?
Yes.
 - Is this project publicly owned or serve a public function? Yes, it is a tribal community center for use by the tribal members/public.
 - Does this project involve leaving iron, steel, manufactured goods, or construction materials permanently affixed to the property? Yes, air filtration devices would be manufactured goods and assuming there would be flame-resistant construction materials affixed.

Because the project would involve construction of real property that serves a public function and leaves relevant materials permanently affixed, BABA would apply.

- 4) A state receives funding to plant shade trees within a community park to reduce potential effects of extreme heat.
- Does this project involve the construction, alteration or repair of a building or real property?
Yes
 - Is the project publicly owned or serve a public function? Yes
 - Does this project involve leaving iron, steel, manufactured goods, or construction materials permanently affixed to the property? No, plants are not subject to BABA. However, the

answer would be yes if the project included manufactured products such as irrigation systems, staking, etc.

Because the project only includes vegetation, BABA would not apply.

- 5) A state receives a subaward for \$1 million. The state will use the funding to develop a robust plan to increase recycling capacity in their state. They will use the funding to hire contractors to complete studies, develop tracking systems, and report data.

a. Does the project involve construction, alteration, maintenance, or repair of infrastructure?

No

Because the project funding is for planning, writing, reporting, and gathering information only, BABA would not apply.

APPENDIX 4: PRODUCTS LIKELY MADE “PRIMARYLY” OF IRON AND STEEL TO BE CLASSIFIED AS IRON AND STEEL

Lined and Unlined Pipe	Lined and Unlined Fittings	Tanks
Flanges	Pipe Clamps and Restraints	Structural Steel
Valves	Hydrants	Pre-Cast, Iron/Steel Reinforced Concrete (of all types, regardless of iron/steel content percentage)
Manhole Covers and other Municipal Castings	Access Hatches	Ballast Screens
Iron or Steel Benches	Bollards	Cast Bases
Cast Iron Hinged Hatches	Cast Iron Riser Rings	Catch Basin Inlets
Cleanout/Monument Boxes	Construction Covers and Frames	Curb and Corner Guards
Curb Boxes	Curb Openings	Curb Stops
Detectable Warning Plates	Downspout Shoes	Drainage Grates
Drainage Grate Frames and Curb Inlets	Inlets	Junction Boxes
Lampposts	Manhole Rings and Frames	Manhole Risers
Meter Boxes	Service Boxes	Steel Hinged Hatches
Steel Riser Rings	Trash Receptacles	Tree Grates
Tree Guards	Trench Grates	Valve Boxes
Valve Box Covers and Risers	Access Ramps	Aeration Pipes and Fittings (separate from aeration/blowers)
Angles	Backflow Preventers /Double Check Valves	Baffle Curtains
Iron or Steel Bar	Bathroom Stalls	Beam Clamps
Cable Hanging Systems	Clarifier Tanks	Coiled Steel
Column Piping	Concrete Reinforcing Bar, Wire, and Fibers	Condensate Sediment Traps
Corrugated Pipe	Couplings	Decking
Digester Covers	Dome Structures	Door Hardware
Doors	Ductwork	Expansion Joints
Expansion Tanks (diaphragm, surge, and hydropneumatics)	Fasteners	Fencing and Fence Tubing
Fire Escapes	Flanged Pipe	Flap Gates
Framing	Gate Valves	Generic Hanging Brackets
Grating	Ground Testing Boxes	Ground Test Wells

Guardrails	HVAC Registers, Diffusers, and Grilles	Joists
Knife Gates	Ladders	Lifting Hooks, J-bar, Connectors within, and Anchors for Concrete
Lockers	Man Baskets and Material Platforms	Manhole Steps
Mud Valves	Municipal Casting Junctions	Non-mechanical (aka stationary) Louvers and Dampers
Overhead Rolling Doors/ Uplifting Doors (manual open, no motor)	Pipe Connectors	Pipe Hangers
Pipe Piling (any type of steel piling)	Pipe Spool (pipe, flanges, connectors, etc.)	Pipe Supports
Pitless Adaptors	Pre-fab Steel Buildings /Sheds (simple structure, unfurnished)	Pre-stressed Concrete Cylinder Pipe (PCCP)
Railings	Reduced Pressure Zone (RPZ) Valves	Roofing
Service Saddles	Sheet Piling	Sinks (not part of eyewash systems)
Solenoid Valves	Stairs	Static Mixers
Stationary Screens	Surface Drains	Tapping Sleeves
Telescoping Valves	Tipping Buckets	Trusses
Tubing	Valve Stem Extensions	Valve Stems (excluding handwheels and actuators)
Wall Panels	Wall Sleeves/Floor Sleeves	Welding Rods
Well Casing	Well Screens	Wire
Wire Cloth	Wire Rod	Wire Rope and Cables

APPENDIX 5: PRODUCTS LIKELY MADE “PRIMARYLY” OF IRON AND STEEL TO BE CLASSIFIED AS MANUFACTURED PRODUCTS

Actuator Superstructures/ Support Structures	Aeration Nozzles and Injectors	Aerators
Analytical Instrumentation	Analyzers (e.g., ozone, oxygen)	Automated Water Fill Stations
Blowers/Aeration Equipment	Boilers, Boiler Systems	Chemical Feed Systems (e.g., polymer, coagulant, treatment chemicals)
Chemical Injection Quills	Chemical Injectors	Clarifier Mechanisms /Arms
Compressors	Controls and Switches	Conveyors
Cranes	Desiccant Air Dryer Tanks	Dewatering Equipment
Dewatering Roll-offs	Disinfection Systems	Drives (e.g., variable frequency drives)
Electric/Pneumatic/Manual Accessories Used to Operate Valves (such as electric valve actuators)	Electrical Cabinetry and Housings (such as electrical boxes /enclosures)	Electrical Conduit
Electrical Junction Boxes	Electronic Door Locks	Elevator Systems (hydraulic, etc.,)
Emergency Life Systems (including eyewash stations, emergency safety showers, fire extinguishers, fire suppression systems including sprinklers /piping/valves, first aid, etc.)	Exhaust Fans	Fall Protection Anchor Points
Fiberglass Tank w/Appurtenances	Filters (and appurtenances, including underdrains, backwash systems)	Flocculators
Fluidized Bed Incinerators	Galvanized Anodes/ Cathodic Protection	Gear Reducers
Generators	Geothermal Systems	Grinders
Heat Exchangers	HVAC (excluding ductwork)	HVAC Dampers (if appurtenances to aerators/blowers)
HVAC Louvers (mechanical)	Intake and Exhaust Grates (if appurtenances to aerators/blowers)	Instrumentation
Laboratory Equipment	Ladder Fall Prevention Systems	Ladder Safety Posts
Lighting Fixtures	Lightning and Grounding Rods	Mechanical or Actuated Louvers/Dampers
Membrane Bioreactor Systems	Membrane Filtration Systems	Metal Office Furniture (fixed)
Meters (including flow, wholesale, water, and service connection)	Motorized Doors (unit)	Motorized Mixers
Motorized Screens (such as traveling screens)	Motors	Pelton Wheels
Pipeline Flash Reactors (similar to injectors)	Plate Settlers	Precast Concrete without Iron/Steel Reinforcement
Furnished Pre-fab Buildings (such as furnished with pumps, mechanics inside)	Presses (including belt presses)	Pressure Gauges

Pump Cans/Barrels and Strainers	Pumps	Mechanical Rakes
Safety Climb Cable	Sampling Stations (unless also act as hydrant)	Scrubbers
Sensors	Sequencing Batch Reactors (SBR)	Steel Shelving (fixed)
Slide and Sluice Gates	Spray Header Units	Steel Cabinets (fixed interior/furniture)
Supervisory Control and Data Acquisition (SCADA) Systems	Tracer Wire	Valve Manual Gears, Actuators, Handles
Voltage Transformer	Water Electrostatic Precipitators (WESP)	Water Heaters
Weir Gates		

APPENDIX 6: WAIVER REQUEST PROCESS

The framework described below establishes the process for an assistance recipient to request waivers of the BABA requirements directly to EPA for OEJECR programs. Pursuant to BABA, EPA has the responsibility to make findings as to the issuance of waivers to the BABA requirements. Subaward recipients must work through the direct recipient of EPA financial assistance prior to requesting a waiver.

Step-by-step Waiver Process:

The waiver process begins with the assistance recipient (this may be the subaward recipient). To fulfill the BABA requirements, the assistance recipient (or subaward recipient) must in good faith design the project (where applicable) and solicit bids for construction with American-made iron and steel, manufactured goods, and construction materials. It is essential that the assistance recipient include the BABA terms in any documentation of project deals, terms for subawards, request for proposals, or solicitations for bids, and in all contracts (see Appendix 2 for sample construction contract language). The assistance recipient may receive a waiver at any point before, during, or after the bid process, if one or more of three statutory conditions is sufficiently demonstrated to EPA and approved.

To apply for a project-specific waiver:

- The assistance recipient should contact their EPA project officer and alert them to the planned waiver request and cc BABA-OEJECR@epa.gov. A draft waiver request may be submitted to the project officer at this point.
- Once OEJECR determines that sufficient documentation and rationale exists for the waiver, the recipient will email the updated request in the form of a Word document (.docx) or editable PDF (.pdf) to BABA-OEJECR@epa.gov and EPA will begin its evaluation.

It is strongly recommended that each primary financial assistance recipient identify a person or persons for BABA communications. For subawards, the primary financial assistance recipient will review the application for the waiver and determine whether the necessary information has been included.

(Note: More information may be provided in the future regarding what information is required to be included in waiver requests).

Evaluation by EPA:

After receiving an application for waiver of the BABA requirements and ensuring sufficient information was provided, EPA will initiate market research. If no domestic product is identified, EPA will then publish the request on its website for at least 15 days for public comment. After reviewing public comment, EPA will determine in consultation with the Made-in-America Office whether the application properly and adequately documents and justifies the statutory basis cited for the waiver.

In the event that EPA finds that adequate documentation and justification has been submitted, the Administrator may grant a waiver to the assistance recipient. EPA will notify the designee whether a waiver request has been approved or not approved as soon as such a decision has been made.

Granting such a waiver is a four-step process:

- Research – After receiving an application for a waiver, EPA will perform market research to determine whether the iron, steel, manufactured goods, or construction materials are available domestically.
- Posting – After research, if sufficient domestic products have not been identified, EPA is required to publish the application and all material submitted with the application on EPA's

website for at least 15 days. During that period, the public will have the opportunity to review the request and provide informal comment to EPA. The website can be found at:

<https://www.epa.gov/cwsrf/build-america-buy-america-baba-waivers-open-public-comment>

- Evaluation – After receiving an application for waiver of the BABA requirements, EPA will determine whether the application properly and adequately documents and justifies the statutory basis cited for the waiver to determine whether or not to grant the waiver.
- Signature of waiver approval by the Administrator or another agency official with delegated authority – As soon as the waiver is signed and dated, EPA will notify the assistance recipient and post the signed waiver on the Agency’s website. The assistance recipient should keep a copy of the signed waiver in its project files.

(Note: Additional steps may be required in the future regarding the waiver process depending on additional guidance from OMB.)

APPENDIX 7: CURRENT AGENCY-WIDE BABA WAIVERS

This list is current as of the date of these procedures. Note that approved waivers can be amended or rescinded at any time. Please check the [EPA BABA website](#) for the latest information regarding approved waivers.

- **Small Project Waiver**
 - If the federal financial assistance award or subaward is less than \$250,000, it may qualify for a Small Project Waiver.
 - Applicability dates: September 26, 2022 to September 26, 2027
 - <https://www.epa.gov/system/files/documents/2022-09/Small%20Proj%20Gen%20App%20Waiver%20BABA%20EPA.pdf>
- **De Minimis Waiver**
 - Recipients can use the De Minimis waiver for any infrastructure project for non-domestically produced items representing up to 5% of the total project cost.
 - Applicability dates: October 21, 2022 to October 21, 2027
 - <https://www.epa.gov/system/files/documents/2022-10/EPA%20BABA%20De%20Minimis%20Waiver%20Final%20Oct%202022.pdf>
- **Minor (Ferrous) Components for Iron and Steel Products Waiver**
 - For iron and steel products, up to five percent of the total material cost of a product can include non-domestically produced miscellaneous minor iron or steel components without further need for a product-specific waiver.
 - Applicability dates: April 11, 2023 to April 11, 2028
 - <https://www.epa.gov/system/files/documents/2023-04/BABA%20Minor%20Components%20Waiver.pdf>
- **Pacific Island Territories Waiver**
 - Recipients in the Pacific Island territories of Guam, American Samoa, and Northern Mariana Islands can use this waiver.
 - Applicability dates: July 5, 2023 to January 5, 2025
 - <https://www.epa.gov/system/files/documents/2023-07/pacific-island--genapp-waiver-approval.pdf>
